

Bank Account System

Java program — Scanner-based deposit/withdraw operations

Program 1: Bank Account System

This program uses Scanner to take user input (choice: 1=Deposit, 2=Withdraw, and an amount). Two sample runs are shown below.

Source Code

```
import java.util.Scanner;
public class Bank {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String name = "Saurav";
        long accNo = 1234567890L;
        String type = "Savings";
        double balance = 5000;
        System.out.println("Account Holder =" + (name));
        System.out.println("Account Number =" + (accNo));
        System.out.println("Account Type =" + (type));
        System.out.println("Account Balance =" + (balance));
        System.out.println("1. Deposit");
        System.out.println("2. Withdraw");
        int choice = sc.nextInt();
        System.out.print("Enter Amount: ");
        double amount = sc.nextDouble();
        if (choice == 1)
            balance += amount;
        else if (choice == 2 && amount <= balance)
            balance -= amount;
        else
            System.out.println("Insufficient Balance");
        System.out.println("\nAccount Holder : " + name);
        System.out.println("Account Number : " + accNo);
        System.out.println("Account Type : " + type);
        System.out.println("Balance : " + balance);
        sc.close();
    }
}
```

Sample Run 1 — Deposit (choice=1, amount=1500)

Output

```
Account Holder =Saurav
Account Number =1234567890
Account Type =Savings
Account Balance =5000.0
1. Deposit
2. Withdraw
Enter Amount:
Account Holder : Saurav
Account Number : 1234567890
Account Type : Savings
Balance : 6500.0
```

Sample Run 2 — Withdraw (choice=2, amount=2000)

Output

```
Account Holder =Saurav
Account Number =1234567890
Account Type =Savings
Account Balance =5000.0
```

1. Deposit

2. Withdraw

Enter Amount:

Account Holder : Saurav

Account Number : 1234567890

Account Type : Savings

Balance : 3000.0
